

Davies Discusses Challenges IT Faces When Building/Remodeling Data Centers at Data Center World 2019

St. Louis, MO – November 5, 2018. Data Center World Organizers have released the full agenda and Tad Davies, Principal, Bick Consulting Services will present “Project Pitfalls - Common Issues IT Should Avoid When Planning and Implementing a New Project” at Data Center World in Phoenix on March 20, 2019.

If IT personnel will ultimately be held accountable for availability, then they should have input into virtually all aspects of their data center build or remodel project.

Geared to IT centric attendees who have involvement or responsibility for a construction or remodel project, this educational session will take a holistic view of a project from planning through implementation. The focus will be educating the IT centric professional about subjects they may not be entirely comfortable with. Topics will include: understanding the vast number of design/construction/AHJs involved and why it matters; setting management expectations early; budgeting; holistic project scheduling vs construction only; and other issues.
